

Dina

Description

The polycarbonate diffuser is assembled on an aluminium body. On/off and dimmer functions by means of a touch sensor on base for the table lamp. This "ordinary" shape hides an LED source. The translucent or chromed diffuser turns transparent when the light is switched on and reveals the absence of a traditional bulb, just like magic. The soft light is ideal for a bedside, desktop or living room table lamp. Available in Chrome, black, blue, transparent and white colour choices.
